

Online Pharmacy Store

Abstract

This is a project designed and developed to manage a pharmacy company. This system consists of three modules Admin, dealers, shops and customers. The admin is the representation of company who manage the transaction and the users. Dealers are mediators of shop and admin. Shop who are medical shop owners or small clinic can register in the site. Once registered they will get an account. The registration request of the customer need to be approved/declined by the admin. Customers can register to a shop and request for medicines.

The registered shop can search for the available medicine and also can request for new medicine, if required. After booking they will receive the medicines to the shop through dealers.

The admin can manage shop add, update or delete stock details, manage medicine bookings and manage history
